

Pre-care instructions Permanent Make up

All permanent cosmetic procedures are multi-session processes. You may need to come back for at least one touch up visit before it can be determined that your work is complete. It is recommended that touch up visits are scheduled within 4 to 6 weeks.

Be prepared for the color intensity of your procedure to be larger, sharper, brighter and darker than what is expected for the final outcome.

While these injected tones may initially simulate the exact color and tone desired, it will not always remain a perfect match. Injected tones are constant, while your own skin tones will vary.

Since delicate skin or sensitive areas may swell slightly or redden, some clients feel it's best not to make any social plans for three days following any procedures.

Bring your brow pencil or shadow with you the day of the procedure.

Any tweezing or waxing should be done at least 48 hours prior to the procedure.

Any eyelash or eyebrow tinting or eyelash perming should be done no sooner than 48 hours before or two weeks after the procedure.

Refrain from the over use of alcohol, aspirin, aspirin-containing medications, fish oils or Ibuprofen for seven days before and two days after any procedure. Refrain from judgment altering drugs for at least 24 hours. No medication should be discontinued without first consulting your physician.
